MICROBIAL DEFENSE SYSTEMS

ALCOHOL FREE HAND SANITIZER

BioGlove™ Hand Sanitizer is a unique product that forms a protective antimicrobial barrier on your hands, offering long lasting protection against germs while gently moisturizing the skin.

A single application of **BioGlove™** Hand Sanitizer on the skin not only eliminates and inactivates bacteria, viruses, and fungi, but also prevents reinfection by maintaining a long lasting protective barrier. Other hand sanitizers on the market today are primarily ethynol or isopropyl alcohol formulations, which are largely antibacterial in nature and only provide protection for a few minutes.

BioGlove™ Hand Sanitizer destroys by lancing, or stabbing the outer membrane of the pathogen (see diagram) vs. traditional alcohol hand sanitizers that poison the pathogen.

What is the true cost of hygiene to business?

Any impact to the health and well-being of staff is detrimental to a business. It affects not only staff morale but also productivity and efficiency. A recent study showed that on average, each sick day taken by an employee costs the employer \$385 in productivity and profits. Businesses lose approximately \$ 17 billion each year to employee sick days.

It has been estimated that up to 80% of all infections are spread by hand contact with contaminated surfaces and direct human contact. Therefore, almost all surfaces we touch or come in contact with will be a harbor of germs and bacteria.

- Alcohol Free
- Forms a protective antimicrobial barrier on your skin
- Destroys Norovirus
- Destroys all strains of Staphylococcus
- Non-toxic
- Gently moisturizes your skin
- Long lasting protection against Pathogenic organisms including; viruses, fungi, and bacteria Golden staph, Streptococci, and E.coli
